**A. Nomogram for OS**

B. Nomogram for RFS

S3 Fig. Cut-off value of total points of nomogram for overall survival (OS) (A) and relapse-free survival (RFS) (B) calculated using the X-tile software. Coloration of the plot represents the strength of the association at each division, ranging from low (dark, black) to high (green). The trisection cut-off value (blue, 0-62.0; grey, 62.1-78.0; red, > 78.0) of total points of nomogram for OS was demonstrated on the histogram in A. The trisection cut-off value (blue, 0-82.0; grey, 82.1-177.0; red, >177.0) of total points of nomogram for RFS was demonstrated on the histogram in B.
